DIGITAL LITERACY

PROJECT REPORT

NAME: RIDDHI GUPTA

REG NO.: 25BSA10042

BRANCH: Btech in CSE Cloud Computing and Automation

COURSE CODE: CSE0001

DATE: 27 March 2026

TASK-1

Project Report: Digital Literacy Awareness Infographic

I created a comprehensive one-page infographic titled "Digital Literacy for Students" using the design platform Canva. The primary reason I chose to use Canva is because of its wide variety of templates and the easy-to-use drag-and-drop functionality allowed me to build an effective, professionally-designed product that represents what it means to be a Student Digital Ambassador.

The infographic is broken up into five themes encompassing a complete picture of what it means to be a good digital citizen. I defined Digital Literacy, presented Safe Internet Practices (such as using TwoFactor Authentication), emphasized the importance of maintaining a Professional Presence on the Internet, provided Actionable Tips for Email Etiquette, and introduced Helpful Digital Tools (e.g., Google Workspace, AI Assistants) to enhance academic productivity. I utilized a dark blue and white color scheme for the design, giving it an authoritative and trustworthy feel while presenting data clearly and in an accessible manner for my peers.

During the construction of the infographic, I learned about the concept of "Information Hierarchy" and had to determine what bits of information were most important for students to know and how to condense large pieces of information into brief but impactful statements. Additionally, arranging the text blocks with corresponding visual icons taught me how to use images effectively to communicate information.

By Riddhi Gupta- Student Digital Ambassador

Digital Literacy for Students

Essential skills for navigating the digital world safely and professionally.

01 What is Digital Literacy?

It is the ability to find, evaluate, and share information clearly through various digital platforms.

02 Safe Internet Practices

Protect yourself by using strong passwords, enabling 2FA, and avoiding suspicious links or downloads.

03 Professional Presence

Curate a positive digital footprint. Use professional photos and keep social media accounts "clean" for future employers.

04 Email Etiquette

Use clear subject lines, formal greetings, and professional language when communicating with teachers or peers.

05 Useful Digital Tools

Master tools like Google Workspace, Canva, and AI assistants to boost your academic productivity and collaboration.

TASK 2

I established a foundational presence on three key platforms: GitHub, LinkedIn, and Kaggle. I selected these three because they collectively cover the core aspects of a professional identity: technical collaboration, professional networking, and data science competency.

GitHub serves as my technical portfolio and version control hub. It is where I will store my coding projects, from small academic assignments to larger personal endeavors. By creating a profile README, I have ensured that anyone visiting my profile sees a personalized introduction, including my name, branch, year, and my goal to deepen my understanding of opensource software development. Over the next four years, I plan to use GitHub to contribute to open-source projects, collaborate with peers on hackathon projects, and build a robust repository of code that demonstrates my growing proficiency to potential employers.

LinkedIn is the standard platform for professional networking. I have updated my profile with a complete Education section, detailing my current degree, institution, and expected graduation year. My strategy for LinkedIn over the next four years is to use it not just for job hunting, but to build a genuine professional network. I will connect with seniors, professors, and industry professionals, share updates on my academic projects, and engage with content relevant to my field to establish a credible professional brand.

Kaggle is a specialized platform for data science and machine learning. I chose it to complement my academic learning with practical, competitionbased experience. While I am a beginner now, I plan to use Kaggle over the coming years to learn from public notebooks, participate in beginnerfriendly competitions, and eventually build a portfolio of data science projects. This will be crucial for developing the analytical skills required in today's technology-driven industry.

Together, these three platforms form a comprehensive digital portfolio that will evolve alongside my academic and professional growth.

TASK-3

My investigation into coding and collaboration sites was done with the use of both HackerRank and Google Forms. Using these websites has allowed me to learn how to practice programming as well as create interactive learning content for other people. Building my account on HackerRank as well as completing a beginner problem has helped me develop not only my programming capabilities but also my logical reasoning skills. There are a variety of coding problems available through HackerRank that break down each coding step and allow me to gain confidence before attempting more complex code problems to tackle on the site. I want to work on HackerRank regularly to help build my problem-solving abilities. Google Forms allows me to create a digital literacy awareness quiz, in both multiple-choice and openended formats, that would test fundamentals of digital literacy, as well as allow me to collect and analyze results from those who completed it. Google Forms is excellent for collecting data from people for a variety of reasons; types of tests may range from quiz-style, surveystyle or even academic based. Both HackerRank and Google Forms will assist in my academic development by improving my coding proficiency and allowing me to develop interactive types of educational material. In addition, I will continue to use both of these platforms moving forward to help expand my knowledge and help me work more productively.

Task 4

Project Report: Professional Email & Etiquette Guide

In this task, I used a document editor to draft two professional emails: a request for an assignment extension and an internship inquiry. My focus was on creating clear subject lines and using formal greetings to ensure a professional tone. I also developed a checklist for responsible social media use to help peers maintain a positive digital footprint.

A real problem caused by poor digital communication occurred during a group project when a team member sent a very short, blunt message in our group chat without any greeting. This was misinterpreted as being angry and demanding, which led to a major argument and a two-day delay in our work. To prevent this, the student should have used a friendly opening and explained their intent more clearly. This situation taught me that without visual cues, choosing the right words and tone is vital for successful online collaboration.

TASK 5

While researching this topic, I was genuinely surprised by how cybercriminals often exploit human emotions rather than relying only on complex technology. Many scams are designed to create urgency, fear, or excitement—such as fake job offers, prize winnings, or messages pretending to be from banks—which makes people act quickly without verifying the source. I found UPI-related frauds particularly alarming, especially the fact that many users lose money simply by approving payment requests, thinking they are receiving funds. This showed me how a small lack of awareness can lead to serious consequences.

As a result, I have decided to change my habit of reacting quickly to online messages or notifications. I will take a moment to verify links, double-check payment requests, and avoid sharing any sensitive information. I will also ensure stronger passwords and enable two-factor authentication to improve my digital security.

CONCLUSION

his project gave me a clear understanding of digital literacy and its significance in today's technology-driven world. Through the various tasks, I explored different areas such as developing informative content, creating a professional online presence, using digital platforms for learning and teamwork, and practicing proper communication etiquette. I also became more aware of cybercrime and the necessary precautions to stay safe while using the internet.

Working on this project enhanced my technical, creative, and communication abilities. It also encouraged me to be more careful and responsible when using digital tools and online platforms. I learned effective ways to present information and maintain a professional approach in online interactions.

Overall, this project was a meaningful learning experience that boosted my confidence and prepared me to use digital technology in a safer, more efficient, and responsible way in the future.
